

## Program Exam

Please write a program in app lab that:

1. Follows all of our naming and other programming conventions.
2. Asks the user for the following input into text boxes on the screen:
  - a. First Name
  - b. Last Name
  - c. Address
  - d. City
  - e. State
  - f. Zip Code
3. Provides for two check boxes to prompt the user if they will be using their middle name with the default value “Yes” selected
4. Provides output that is \*precisely\* the same as one would use on an envelope. For example:

Eric Charles Wolgemuth  
5101 Rosedale St  
Gig Harbor, WA 98335

Or if the user has checked the ‘No’ box for middle name:

Eric Wolgemuth  
5101 Rosedale St  
Gig Harbor, WA 98335

Do not worry about any other error checking

Please save the file as a .txt file named “appLabTest.txt” on your Google Drive, share it with me and put a link on our classroom submittal site.
